About Us

Our research into homosexuality started in 1987 when we met a married man, Noel Mosen, who told us he had been a promiscuous gay man for more than 20 years and a gay political activist for more than half that time. We got to know him and his wife, Jan. He introduced us to the news that gays didn't always stay gay, and to other same-sex attracted people who were on a similar journey out of the lifestyle and orientation.

Six years later the first of our several books on homosexuality was published. *Craving for Love* (Monarch UK, 1993, 2003, reprinted 2010, 2015, 2017) by Briar Whitehead, interviewed scores of people with a homosexual orientation who were at varying stages in the process of change. The book looked at causes of homosexuality and the process of change. The second was a written submission to a New Zealand Government Select Committee during the passage of gay rights legislation. It defended the rights of gays to change their orientation if they wished; gay activism had intended to use the legislation to make assisted change of orientation a discriminatory act.

This, the 4th edition of *My Genes Made Me Do It!*, is the result of a nearly 30 year review of over 10,000 papers from all sides of the debate: scientific, sociological and psychological, including those written by gay scientists motivated to find a genetic or biological imperative behind homosexuality. The first edition of the book was published in the USA in 2000.

Neil Whitehead (PhD) biochemistry) has worked for 40 years as a research scientist in New Zealand and around the world. Briar Whitehead is a journalist and writer and editor of this edition of *My Genes Made Me Do It!*
